

Program Administrative System (PAS)

PAS is an easy-to-use administrative system for social service activity tracking. It can be used by a single agency or by multi-agencies in collaboration. It provides the necessary data for each stakeholder promoting better more efficient client outcomes. It can be deployed immediately with minimal set-up requirements.

Processes:

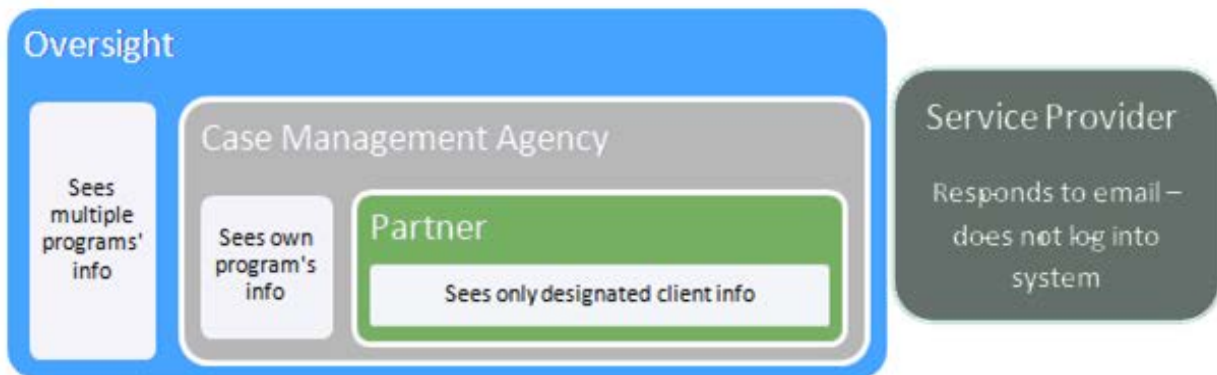

- Information
- Service/activity assignment
- Outcomes

Includes automatic prompts to service providers (via email), automated activity verification tools and budget calculators

Tracks by individual and/or family

Web-based, MVC technical platform with SQL database

PAS includes security layers for oversight of multiple programs and for limited access partners. Service providers and other activity verification sources (such as employers) do NOT need to log into the system to participate in automated follow-up, their input is requested and comes back into the system through automatically generated email forms. Reports and data collected can be customized by system licensees.

PAS has been refined through the collaborative efforts of its user groups which serve more than 40,000 people using the system. These include agencies such as **United Way, NJ Parole and Probation, City of Newark Office of Reentry, Family Success Centers, Salvation Army,** and many others.
